INTRODUCTION TO BUSINESS ARCHITECTURE

Business Architecture is a formal approach to modelling organisations - their business capabilities and/or IT-enabled business activities carried out to enable the organisation to achieve its goals and objectives. The benefit of modelling is that it allows you to analyse various approaches to solving business challenges, as well as to assess impacts on a variety of variables such as costs, resources, staffing, capability location, and IT enablement, etc.

COURSE DESCRIPTION

This three-day course is an introduction to Business Architecture and covers the frameworks and tools needed for the discipline. It includes information on the Business Architect role as well as practical guidance on setting up and operationalising a Business Architecture function. The course is rounded off with a case study and numerous exercises to help delegates apply the theory they have learned and to show them how practically to do Business Architecture.
